

Are you a healthy, right-handed adult between the ages of 18 and 35? You may qualify to participate in a research study!

The ONRC is currently looking for individuals between the ages of **18 and 35** with **relatives who have alcoholism or a history of alcoholism** to participate in a research study.

What does the study involve?

- The research study consists of four separate days: one 4 hour screening visit as well as three research visits each lasting approximately 7 hours. Each research visit you will be administered either a placebo, 50 mg dose of Saracatinib or 125 mg dose of Saracatinib. Saracatinib has been used in previous research studies, but is the same type of drug expected to play a role in alcoholism therapy .
- Participants will be compensated at a rate of \$20 per hour for the time it takes to complete the study, plus given the opportunity to win more money on computerized tasks.

For more information or to volunteer for the study, please contact Alana Gallagher at 860-545-7255 / Alana.Gallagher@hhchealth.org

In order to assess whether you qualify for the study you must first complete a brief screening process. This can be done over the phone when you call.
